PROFESSIONAL SUMMARY

Software Engineering Technician graduate from Centennial College with experience building full-stack web applications using React, TypeScript, Node.js, Prisma, Supabase, MongoDB, and PostgreSQL. Built projects including FreshTrace, an OCR-powered grocery management platform with AI-assisted features and real-time database integration. Recognized at the NASA Space Apps Challenge for Most Creative Project and Best Use of Data Sources.

EDUCATION

Centennial College

Software Engineering Technician Diploma

Toronto, ON

January 2025 – April 2026

EXPERIENCE

Alignerr

Technical AI Evaluator (YAML & Structured Data)

Remote

2026 – Present

- Evaluated and validated YAML-based datasets, structured content, and AI-generated outputs for accuracy, consistency, and compliance with project requirements
- Performed technical quality assurance on AI-generated responses, identifying formatting issues, logical inconsistencies, and instruction-following errors
- Applied analytical problem-solving and attention to detail while working with structured data, annotation guidelines, and large language model evaluation workflows

PROJECTS

FreshTrace – Grocery Management Platform

Team Project | [Demo](#) | [GitHub](#)

React, TypeScript, Prisma, Supabase

2026

- Built a full-stack grocery management platform that scans receipts using OCR and organizes items by freshness priority
- Developed responsive React/TypeScript components and integrated backend APIs for receipt uploads, item management, and database operations
- Implemented AI-powered recipe suggestions, receipt image storage, and dynamic food tracking features
- Used Prisma ORM, Supabase Storage, and PostgreSQL for cloud-based data management

Cafe195 – Full-Stack Coffee Shop Ordering Platform

Personal Project | [Demo](#) | [GitHub](#)

React, Node.js, Express, MongoDB

2025

- Built a full-stack coffee shop ordering platform using React, Node.js, Express, and MongoDB
- Implemented CRUD operations for products, orders, and user accounts through REST APIs
- Created role-based dashboards for admin and user workflows
- Debugged API issues and tested endpoints using Postman to improve reliability

NASA Space Apps Hackathon Web Application

Team Project | [Demo](#)

HTML, CSS, JavaScript, NASA APIs

2025

- Developed a web application integrating NASA APIs to display asteroid prediction data
- Processed JSON data from external APIs and generated dynamic UI content
- Collaborated with a team to design, test, and debug features under hackathon time constraints
- Awarded Most Creative Project and Best Use of Data Sources

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C#, Java, Python, SQL

Frameworks & Technologies: React, Node.js, Express, Prisma ORM, Tailwind CSS, REST APIs

Databases & Cloud: PostgreSQL, MongoDB, MongoDB Atlas, Supabase

Tools & Systems: Git, GitHub, Postman, VS Code, Docker, Linux

Development Practices: Agile, Scrum, OOP, Debugging, Testing, SDLC
