

Amir Mohammadi

Coquitlam, BC | (437) 258-1384 | [Email](#) | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Software Engineering Technician graduate with full-stack development and AI evaluation experience. Built React/TypeScript applications with Node.js, REST APIs, PostgreSQL, and MongoDB, including FreshTrace, an OCR-powered grocery platform with AI-assisted recipes and cloud-backed data integration.

EDUCATION

Centennial College

Software Engineering Technician Diploma

Toronto, ON

January 2025 – April 2026

EXPERIENCE

Alignerr

Technical AI Evaluator (YAML & Structured Data)

Remote

2026 – Present

- Evaluated YAML-based datasets, structured content, and AI-generated outputs for accuracy, consistency, and project requirements.
- Performed technical QA on AI-generated responses, identifying formatting issues, logical inconsistencies, and instruction-following errors.
- Worked with structured data, annotation guidelines, and large language model evaluation workflows.

PROJECTS

FreshTrace – AI Grocery Management Platform

2026

React, TypeScript, Prisma, Supabase, PostgreSQL

Team Project | [Demo](#) | [GitHub](#)

- Built a full-stack grocery platform that extracts receipt items using OCR and organizes inventory by freshness and expiration priority.
- Developed React/TypeScript frontend components and integrated backend APIs for receipt processing, inventory management, and database operations.
- Implemented AI-assisted recipe recommendations using inventory data and structured application data.
- Used PostgreSQL, Prisma ORM, and Supabase Storage for cloud-backed data workflows, with Supabase Auth for authentication.
- Debugged OCR, API, authentication, and database integration issues; tested API and UI behavior with Vitest.

Cafe195 – Full-Stack Coffee Shop Ordering Platform

2025

React, Node.js, Express, MongoDB

Personal Project | [Demo](#) | [GitHub](#)

- Built a full-stack coffee shop ordering platform using React, Node.js, Express, and MongoDB.
- Developed REST APIs and CRUD operations for products, orders, and user accounts.
- Implemented JWT authentication, bcrypt password hashing, and role-based authorization for admin and customer workflows.
- Debugged API behavior and tested endpoints using Postman.

NASA Space Apps Hackathon Web Application

2025

HTML, CSS, JavaScript, NASA APIs

Team Project | [Demo](#)

- Developed a web application using NASA APIs to display asteroid and near-Earth-object data.
- Processed JSON responses from external APIs and generated dynamic UI content.
- Collaborated with a team to design, test, and debug features during the hackathon.
- Received Most Creative Project and Best Use of Data Sources awards.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C#, Java, Python, SQL

Frameworks & Technologies: React, Node.js, Express, .NET, Prisma ORM, REST APIs, Tailwind CSS

Databases & Cloud: PostgreSQL, MongoDB (NoSQL), MongoDB Atlas, Supabase

Tools & Systems: Git, GitHub, Postman, Docker, Linux, VS Code

Development Practices: Agile, Scrum, OOP, Debugging, Automated Testing (Vitest), SDLC
