PROFESSIONAL SUMMARY

Software Engineering Technician graduate from Centennial College with hands-on experience building full-stack web applications using React, Node.js, TypeScript, Prisma, Supabase, MongoDB, and PostgreSQL. Developed multiple projects including FreshTrace, an Agile-based food management platform with OCR receipt scanning, AI-powered recipe suggestions, and real-time database integration. Won “Most Creative Project” and “Best Use of Data Sources” at the NASA Space Apps Challenge. Strong foundation in full-stack development, REST APIs, debugging, database systems, and scalable software architecture.

EDUCATION

Centennial College

Software Engineering Technician Diploma

Toronto, ON

January 2025 – April 2026

PROJECTS

FreshTrace – Grocery Management Platform

React, TypeScript, PostgreSQL

Team Project | [Demo](#)

2026

- Collaborated in a 5-person Agile Scrum team across multiple development iterations
- Developed a full-stack application that scans grocery receipts using OCR and organizes items by freshness priority
- Built responsive front-end components and integrated backend APIs for receipt uploads, item management, and database operations
- Implemented AI-powered recipe suggestions, receipt image storage, and dynamic food tracking features
- Used Prisma ORM, Supabase Storage, and PostgreSQL for cloud-based data management
- Participated in testing, debugging, API integration, and sprint reviews

Cafe195 – Full-Stack Coffee Shop Ordering Platform

React, Node.js, Express, MongoDB

Personal Project | [Demo](#)

2025

- Built a full-stack web application using React frontend and Node.js/Express backend
- Implemented CRUD operations for products, orders, and user accounts
- Designed REST APIs and managed application data using MongoDB Atlas
- Created role-based dashboards for admin and user accounts
- Debugged API issues and tested endpoints using Postman to ensure application reliability
- Managed version control using Git and GitHub for organized development workflow

NASA Space Apps Hackathon Web Application

HTML, CSS, JavaScript

Team Project | [Demo](#)

2025

- Developed a web application integrating NASA APIs to display asteroid prediction data
- Processed JSON data from external APIs and generated dynamic UI content
- Collaborated with a development team to design and debug application features
- Worked with external APIs and JSON data processing to handle real-time asteroid information efficiently
- Contributed to front-end design and responsive UI improvements under hackathon time constraints
- Awarded Most Creative Project and Best Use of Data Sources

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C#, Java, Python, SQL

Frontend: React, HTML5, CSS3, Responsive UI Design

Backend: Node.js, Express, REST APIs, Prisma ORM

Databases & Cloud: PostgreSQL, MongoDB, MongoDB Atlas, Supabase

Developer Tools: Git, GitHub, Postman, VS Code, Visual Studio

Systems: Linux / Unix Command Line, Docker, Virtual Machines

Development Practices: Agile, Scrum, Object-Oriented Programming (OOP), Debugging, Testing, SDLC
